PROFESSIONAL SUMMARY

Full-stack software engineer with production experience building web applications, AI-powered automation, and data-processing systems end to end — React / Next.js and TypeScript on the frontend, Node.js services on the backend. Recent work spans AI transcript parsing, course-equivalency and credit-allocation algorithms across ~1,000 academic programs, and automated influencer-discovery pipelines processing data from major social platforms.

PROFESSIONAL EXPERIENCE

Reina LLC

Software Engineer (Contract)

Miami, FL

2024 – Present

Bloom Nutrition — Influencer Discovery & Outreach Automation

- Built an automated influencer-discovery pipeline in n8n that scouts creators against defined criteria, replacing manual sourcing and multiplying the throughput of the outreach team.
- Re-architected the discovery system from the n8n workflow into a native TypeScript service, adding request batching and parallelization to query social-platform data (TikTok, Facebook, and others) at substantially higher speed and volume.
- Integrated the OpenAI SDK to score and enrich discovered creators, and designed a Supabase data layer with Redis-backed queueing and caching to keep the pipeline fast and idempotent.
- Designed the discovery-to-influencer data schema (discovery queue → enriched creators → managed records), keeping automated scouting traceable and separate from the core system.

Stack: TypeScript, n8n, Redis, Redux Toolkit (RTK), Supabase, OpenAI SDK

Transfer-Credit Evaluation Platform — Full-Stack Development

- Delivered full-stack features across the frontend and backend, building student-facing flows to navigate and request course and program transfers across institutions.
- Built an AI-powered transcript ingestion feature that extracts and parses uploaded transcript PDFs and maps the courses into the platform database, removing a manual data-entry step from the upload process.
- Engineered a course-equivalency matching engine and a credit-allocation algorithm that computes how a student's completed courses apply toward target-program requirements, operating across roughly 1,000 programs.
- Built logic for institutional articulation and pathway agreements, applying pre-negotiated block credits accurately without double-counting against individually matched courses.
- Built a “what-if” audit tool that lets students simulate how their courses apply to a program and add hypothetical courses to see what they still need to qualify for program pathways.
- Created a distance-based school-sorting algorithm and an admin bulk data-upload feature enabling institutions to rapidly import their course and program data.

Stack: JavaScript, TypeScript, React / Next.js, Node.js, MySQL

TRAINING

Thinkful

Certificate, Software Engineering

Remote

2022

Immersive program in JavaScript, React, Node.js, PostgreSQL, REST APIs, algorithms, and data structures, with one-on-one mentorship from senior engineers.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Java, Bash, SQL, HTML5, CSS3

Frontend: React, Next.js, Redux / RTK, React Native, Vue / Nuxt, Tailwind, Material UI, SASS

Backend & Data: Node.js, Express, REST, GraphQL, PostgreSQL, MySQL, MongoDB, Supabase, Redis

AI, DevOps & Tools: LLMs, RAG, AWS (IAM, S3, Lambda, ECS, CloudWatch), Git, GitHub, Docker
